

iCombi Pro

iCareSystem AutoDose.

Simple. Safe. Clean.

iCareSystem AutoDose.

Integrated solid cleaner. Optimal dosing.

iCareSystem AutoDose is the autonomous cleaning system for iCombi Pro tabletop units.

With iCareSystem AutoDose, cleaning is completely autonomous if desired: It starts according to a predetermined schedule and takes exactly the right dose from the integrated, solid cleaner. It only uses the amount necessary for optimal hygiene.

This increases work safety, saves a lot of time and contributes to HACCP safety.

1 Built-in solution for solid chemical cartridges

The chemical storage system is fully integrated into the tabletop units. They have the same dimensions and connections as the standard appliance. No adjustment of the installation or additional installation costs are necessary.

The intelligent slots automatically detect which type of chemical is inserted at which location, and enables storage according to your requirements.

The cartridges contain solid chemicals that ensure safe replacement of the cartridges: No decanting, spilling or leakage. Sensors detect the amount of chemical required and precisely control the dosage. This saves resources and budgets. They are also environmentally-friendly: The cartridges are made of 100% recyclable PP material.

The option includes:

- > 4 flexibly mountable cartridge slots
- > Extensive software and cleaning functions

2 Intelligent cleaning functions

In addition to the standard functions, the storage option allows you to individually adjust the amount of chemicals per cleaning cycle and to save these settings as a separate program. This means that cleaning can be adapted and optimized to suit your own needs and requirements.

Cleaning functions:

- > 9 cleaning programs
- > Usage-dependent, intelligent cleaning suggestions
- > Programming function for creating your own cleaning programs
- > Individually adjustable chemical quantities
- > User-specific adjustment of the cleaning overlay
- > Automatically powers off after cleaning

3 Autonomous cleaning, the carefree package

The option allows automatic or even fully autonomous cleaning: This provides hygiene and maintenance safety, saves work time, and costs.

In the cleaning settings, cleaning cycles can easily be programmed for each day according to appliance usage or according to your weekly schedule, even with multiple cleaning cycles per day. You decide whether a notification is sufficient or whether the cooking system – after an appropriate warning – should initiate the cleaning or start automatically. Alternatively, you can have the cooking system intelligently select and perform the appropriate cleaning at set times.

Programming options:

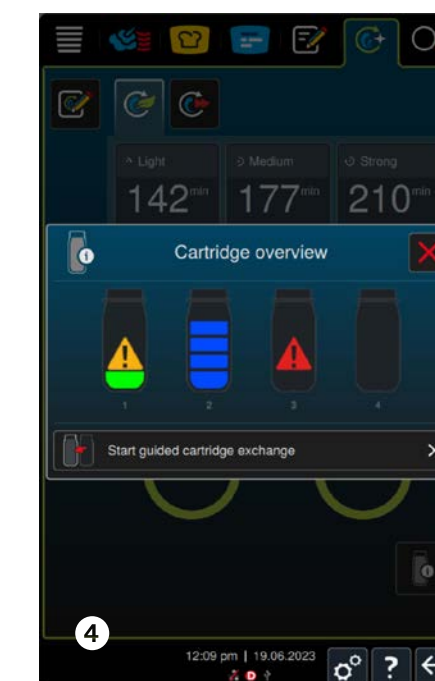

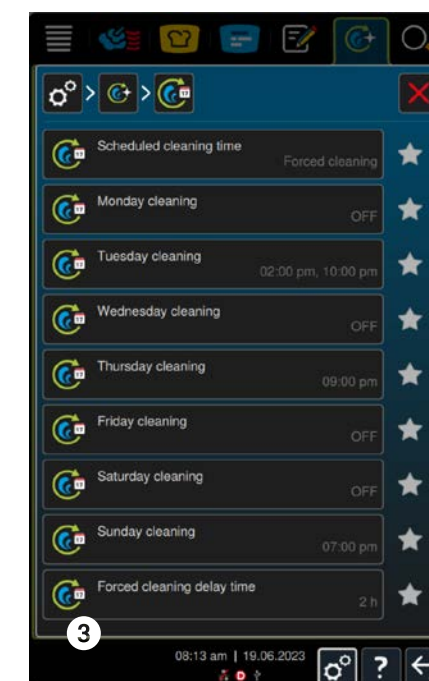

- > Cleaning according to schedule (week, day)
- > Cleaning after use
- > Cleaning advice or initiate cleaning
- > Fixed cleaning program or use-based cleaning
- > Autonomous cleaning with/without powering off

4 Fully automatic, but always well-informed

Automatic or autonomous cleaning relieves you of all unnecessary cleaning tasks. Nevertheless, the cooking system always keeps you updated and warns you, for example, if the remaining quantity of chemicals falls below a specified level or if cleaning is due. The cooking system also supports cartridge replacement with notifications.

Notification functions:

- > Display of remaining number of cleaning cycles
- > Display of cleaning and care status
- > Automatic notification of cartridge fill level (can be set in 5% increments)
- > Overview of cartridge levels
- > Guided cartridge change
- > Notification after cleaning is complete
- > Warnings/sounds before automatic/autonomous cleaning
- > Notifications also displayed in ConnectedCooking

Availability for RATIONAL cooking systems

	Energy type	iCombi Pro	iCombi Classic
Size XS	Electric	–	–
Size 6-half, 10-half	Electric	●	–
Size 6-full, 10-full	Electric	●	–
Size 6-half, 10-half	Gas	●	–
Size 6-full, 10-full	Gas	●	–
Size 20-half	Electric/Gas	–	–
Size 20-full	Electric/Gas	–	–
